

SQL Learning Journal #4 – Multiple Criteria, LIKE and IN

Introduction

In today's lesson, I learned how to filter data using multiple conditions using AND, OR, BETWEEN, LIKE, NOT LIKE and IN operators.

SQL Commands Learned Today

```
SELECT * FROM table_name WHERE name='John' OR name='Mike';  
SELECT * FROM table_name WHERE name='John' AND city='Istanbul';  
SELECT * FROM table_name WHERE age BETWEEN 5 AND 10;  
SELECT * FROM table_name WHERE age BETWEEN 5 AND 10 AND city='Istanbul';
```

```
WHERE name LIKE 'Joh%'  
WHERE name LIKE 'Joh_'  
WHERE name NOT LIKE 'Y%'  
WHERE name LIKE '%s'  
WHERE name LIKE '__n%'
```

```
WHERE year IN (1973,1977,1979);  
Equivalent to: WHERE year=1973 OR year=1977 OR year=1979;  
WHERE name IN ('John','Albert');
```

What I Learned Today

Regular practice is essential. Understanding SQL syntax is only the first step; writing queries repeatedly is the best way to remember commands and improve SQL skills.
