

SQL Learning Journal #7– ALIAS AND ARITHMETIC

1. SQL Commands Learned Today

a. We can use arithmetical sign directly:

$+, -, *, /$

SELECT (5+5);

SELECT (4-3);

SELECT (2*3);

SELECT (8/3);

SELECT (8.0/3.0);

NOTE: There is two different result from the division above. If we write the number as integer/decimal, we can take the integer/decimal result.

b. We can use arithmetical operations with field_name of the data table. But we should use ALIAS everytime after aritmetical operations to avoid confusion.

SELECT (field_name1-field_name2)

FROM table_name;

SELECT (budget1-budget2_age) **AS** bigbudget

FROM table_name;

2. Learning Notes:

I understand the importance of the paranthesis.
