

SQL Learning Journal #— GROUPING DATA

Introduction

I learned to group the data according to the properties (field_names) today.

SQL Commands Learned Today

GROUP BY.

GROUP BY function is used with aggregation function as COUNT.

1. GROUP BY with single field

If we don't use aggregating function below query, result produce error.

```
SELECT age, COUNT (year) AS year_count
```

```
FROM table_name
```

```
GROUP BY year;
```

2. GROUP BY with multiple field

```
SELECT age, year, COUNT (city) AS count_city
```

```
FROM table_name
```

```
GROUP BY age, year;
```

3. GROUP BY with ORDER BY

```
SELECT age, year, COUNT (city) AS count_city
```

```
FROM table_name
```

```
GROUP BY age, year
```

```
ORDER BY age DESC
```

```
LIMIT 5;
```

What I Learned Today

I learned how can I get/retrieve information from data table by using GROUP BY function.
