

SQL Learning Journal #4 – MULTIPLE CRITERIA-SORTING-GROUPING

1. SQL Commands Learned Today

a. Operators for multi criteria: OR, AND, BETWEEN ... AND ...

```
SELECT *  
  
FROM table_name  
  
WHERE name='john' OR age='mike'
```

```
SELECT *  
  
FROM table_name  
  
WHERE name='john' AND age='mike'
```

```
SELECT *  
  
FROM table_name  
  
WHERE age BETWEEN 5 AND 10
```

```
SELECT *  
  
FROM table_name  
  
WHERE age (BETWEEN 5 AND 10) AND city='İstanbul'
```

b. Filtering text with LIKE, NOT LIKE and IN:

WHERE name **LIKE** 'joh%' *that command can match john, johnson (* means one or more character)*

WHERE name **LIKE** 'joh_' *that command matches only john (_ means only one character)*

WHERE name **NOT LIKE** 'Y.%' *that command finds that doesnt include A.*

WHERE name **LIKE** '%s' *that command finds text with r in the last character of text*

WHERE name **LIKE** '__n%' *that command finds text has n character in the third letter in the text*

c.

WHERE year **IN** (1973, 1977, 1979); *that command has the same query result with below command*

WHERE year=1973

OR year=1977

OR year=1979;

WHERE name **IN** ('john', 'albert');

2. Learning Notes:

More practice means more learning. First you can understand all commands. When you start to practice you understand that you can forget how you can write the commands.
